

Adjustable track for distribution box

AI Overview

An Adjustable Track Distribution Box is a flexible electrical enclosure that allows configurable power distribution with adjustable amperage and modular connections for industrial, commercial, or railway applications. Overview An Adjustable Track Distribution Box is designed to provide safe, reliable, and adaptable power distribution. These boxes can accommodate varying loads and allow users to modify connections or output ratings according to specific requirements. They are commonly used in environments where power needs change frequently, such as data centers, manufacturing facilities, laboratories, commercial spaces, and railway infrastructure.

Key Features

- Adjustable Amperage and Circuit Configuration:** Many units, such as the Load Master® Series, feature adjustable circuit breakers and output ratings, allowing the box to match specific load requirements and adapt to changing power demands.
- Modular and Flexible Design:** Track busway systems, like Starline's, allow plug-in units to be inserted or relocated easily, providing scalable power distribution without extensive rewiring.
- Durable Construction:** For harsh environments, especially trackside or outdoor applications, enclosures are built from high-durability materials such as GRP, stainless steel, or mild steel, often with high IP ratings for water and dust protection.
- Mounting Options:** Adjustable track distribution boxes can be mounted on posts, walls, concrete bases, or troughs, depending on the installation requirements.
- Compliance and Safety:** Many boxes are designed to meet industry standards, including PADS approval for railway applications, UL 1640 certification for portable units, and other relevant electrical safety standards.

Applications

- Industrial and Commercial Facilities:** Powering machinery, lighting, security systems, and other equipment with flexible, scalable distribution.
- Railway Infrastructure:** Trackside connection boxes (Dis Boxes) provide secure connections for signalling, axle counters, level crossings, and other trackside equipment.
- Temporary or Portable Po...**
