

Burkina Faso High-Speed Optoelectronic Connection QSFP-DD

Overview

QSFP-DD is a new module and cage/connector system similar to current QSFP, but with an additional row of contacts providing for an eight lane electrical interface. It is being developed by the QSFP-DD MSA as a key part of the industry's effort to enable high-speed solutions. Cisco has expanded the range of 400G digital coherent QSFP-DD transceivers with the 400G QSFP-DD. 0 over optical link, enabling scalable server disaggregation and efficient rack-to-rack interconnects ideal for AI/ML and rack-scale data center expansion. QSFP-DD extends the use. The NetEngine 8000 M8, NetEngine 8100 M8, and NetEngine 8000E M8 offer a maximum capacity of 1. 2T, which can smoothly evolve to 2T to meet future bandwidth growth requirements. These small, modular optical interface transceivers offer a convenient and cost-effective solution for an array of applications in the data center, campus, metropolitan-area access and ring network.
