

Burkina Faso Temperature Control Cabinet 800mm Depth

AI Overview

Temperature-controlled cabinets with 800mm depth are available for precise storage of medications and sensitive materials, with options for local sourcing in Burkina Faso.

Overview of Controlled Room Temperature Cabinets

Controlled Room Temperature (CRT) cabinets are designed to maintain a stable environment between 68°F and 77°F (20°C to 25°C), ideal for storing pharmaceuticals, vaccines, and other temperature-sensitive items. These cabinets typically feature:

- Digital microprocessor temperature controllers for precise monitoring
- Forced-air directional refrigeration systems to ensure uniform temperature
- Adjustable shelving to accommodate various storage needs
- Security features such as locking doors to protect contents

CRT cabinets are widely used in clinical and laboratory settings to prevent spoilage and maintain potency of stored materials.

800mm Depth Cabinets

Cabinets with an 800mm depth are commonly available in both server/data and laboratory storage formats. For example:

- Data cabinets with 800mm depth can support heavy loads (up to 600kg) and are suitable for high-density equipment storage.
- Commercial series cabinets like the 42U NavePoint model offer pre-assembled setups, adjustable mounting rails, and cable management, which can be adapted for temperature-controlled applications with additional cooling or refrigeration units.

While these are primarily designed for IT equipment, similar dimensions are used in CRT cabinets for laboratory and pharmaceutical storage.

Suppliers and Availability in Burkina Faso

Local manufacturers and suppliers: Burkina Faso has control cabinet manufacturers and suppliers that can provide custom or standard cabinets suitable for temperature control.

International suppliers: Companies like Grainger and LabRepro offer CRT cabinets that can be shipped internationally, providing digital temperature control a...
