

Channel-type covered cable tray

Overview

Channel cable trays have powder coated, hot-galvanized and electro galvanized surface mainly used to support computer cables, communication cables, thermocouple cables and other control cables. Learn about ladder, perforated, solid-bottom, wire mesh, and channel trays in this complete guide. What is Cable Tray Systems?

An electrical cable tray is a type of containment system used to support insulated electrical. T&B channel tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminum alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy). The choice of material for any particular installation depends on the installation environment. Cable trays support insulated electrical cables in industrial and commercial settings. Each cable tray type performs a different function and comes in various materials such as aluminum. Meeting this need is the Channel Cable Tray —a specialized, compact, and highly versatile system designed for the intricate network of cables that power our modern industrial and commercial facilities.
