

Comoro Custom Fireproof Cable Trays

AI Overview

Comoro fireproof cable trays are specialized aluminum alloy trays designed to support and protect cables while providing high fire resistance and durability. Overview Comoro cable trays are made from aluminum alloys, offering a combination of lightweight construction, corrosion resistance, and mechanical strength suitable for industrial and commercial installations. These trays are engineered to resist extreme temperatures and prevent fire propagation, ensuring the safety of electrical systems in critical infrastructure, industrial plants, and commercial buildings. Fireproof coatings enhance their resistance to heat, corrosion, and wear, extending the lifespan of the trays and the cables they support.

Fireproofing and Coatings Fireproof cable trays, including Comoro trays, undergo a meticulous coating process to ensure compliance with national safety standards. Key steps include:

- Cleaning and rust removal:** Surfaces are prepared by sandblasting, acid washing, or grinding to ensure proper adhesion.
- Primer application:** Primers with strong adhesion and anti-corrosion properties are applied uniformly.
- Fireproof topcoat:** A durable, weather-resistant topcoat is applied to achieve the required fireproof grade.

Inspection and testing: Fire resistance, adhesion, and coating uniformity are verified to ensure long-term performance. These measures ensure that the trays maintain functional integrity of cables during a fire, allowing continued power and communication operations.

Installation Guidelines Proper installation is critical for fireproof cable trays:

- Tray selection:** Choose aluminum alloy trays with sufficient width and thickness to support the cable load.
- Segregation:** Separate power and signal cables to minimize interference.
- Fire barriers:** Install barriers within trays to isolate fire zones.
- Penetration sealing:** Seal tray openings through walls or floors with fire-rated materials.
- Heat dissipation:** Use perforated or mesh trays to improve airflow and prevent heat accumulation.
- Routine inspection:** Check for corrosion, deformation...
