

# Distribution box model nx

## AI Overview

Chint NX series distribution boxes are modular electrical units designed for safe and efficient power distribution across residential, commercial, and industrial applications.

**Overview of NX Series Models**  
**NX2:** Designed for residential and light commercial use, the NX2 distribution box houses MCBs, RCDs, and other protective devices. It supports 8 to 36 ways, allowing flexibility for future expansion. The enclosure is made of durable plastic, with internal terminal blocks for neutral and protective grounding connections, ensuring safe and organized installation.

**NX8:** This consumer unit supports 5 to 24 ways and operates at up to 100A, 230V AC. It features a neon indicator for power status, modular 9mm components, and a combination of plastic and metal construction. The NX8 allows customizable circuit arrangements and convenient operation with exposed handles while keeping live parts safely enclosed.

**NX9/NX9G:** The NX9 series is designed for final distribution, accommodating miniature or plastic circuit breakers as main switches and 9mm modular MCBs as auxiliary switches. It includes a 3-phase busbar and supports modular installation for energy-efficient and safe electrical systems. The NX9 is suitable for residential and small commercial setups.

**NX10:** A high-performance distribution box, the NX10 series offers robust construction, compact design, and advanced safety features such as overload, short-circuit, and surge protection. It is modular, easy to install, and compliant with IEC, UL, and CE standards, making it suitable for residential, commercial, and industrial applications.

**NX30:** Targeted at industrial automation and PLC systems, the NX30 supports up to 15 circuits and is designed for high-power requirements. Its compact size and durable construction make it ideal for complex industrial setups requiring reliable and scalable power distribution.

**Key Features Across NX Series**  
**Modular Design:** Most NX boxes use 9mm modular components, allowing flexible circuit configurations.  
**Safety:** Internal termin...
