

Dutch Control Distribution Box Custom Price

AI Overview

A custom Dutch control distribution box typically costs around 35% more than a standard cabinet, with prices varying based on materials, size, and customization options.

Pricing Overview For a customized control or distribution box, the base price of a standard cabinet is increased by approximately 35% to account for tailored features such as specific dimensions, cutouts for pushbuttons, HMI touchscreens, or internal component layouts. The final cost depends on:

- Material choice:** Stainless steel (AISI 304L or 316L) is common for durability and corrosion resistance, with 316L being more expensive due to higher chemical resistance.
- Customization complexity:** Additional drilling, laser-cut panels, or integration of specialized components like voltmeters, ammeters, or explosion-proof elements can increase costs.
- Size and internal configuration:** Larger enclosures or multi-level internal structures require more materials and labor, affecting the price.
- Certifications:** Boxes designed for hazardous areas (ATEX, IECEx) or extreme temperatures may carry higher costs due to compliance requirements.
- Lead Times** Custom manufacturing typically takes 4 to 10 weeks, depending on the type of cabinet and the level of customization.

Preparing a custom offer with 2D or 3D drawings usually requires 1 to 2 weeks before production begins.

Additional Considerations

- Standard vs. custom:** Standard cabinets are less expensive and faster to deliver, but custom solutions provide precise fit, professional finish, and integration for specific control needs.
- Professional installation:** For distribution boxes connected to mains power, certified electricians are required to ensure compliance with Dutch safety standards (NEN 1010, NEN 3140), which may add to the total project cost.
- Optional features:** Explosion protection, specialized push buttons, or integrated control devices can further increase the price, especially for i...
