

# Energy Storage Cabinet Lithium Battery Warranty

## AI Overview

Lithium battery packs in energy storage cabinets typically have a performance warranty of 10 years or until a specified minimum energy throughput, with product warranties covering other components. Performance Warranty Most lithium battery packs, such as those from GOODWE, provide a performance warranty that covers only the battery cells. For example, GOODWE guarantees that the energy storage system will retain at least 70% of usable energy within 10 years from the warranty start date, or reach a defined Minimum Throughput Energy, whichever occurs first. The performance warranty ensures that the battery maintains its energy capacity and efficiency over time, but does not cover other components like the battery module casing, electronics, or accessories. Product Warranty Components other than the battery cells, including modules, inverters, and system accessories, are covered under a product warranty, which is separate from the performance warranty. This warranty typically covers defects in materials or workmanship and may vary by manufacturer. For instance, GOODWE specifies that all non-cell components are only covered under the product warranty and are excluded from the performance warranty. Warranty Start Date and Conditions The warranty period usually begins from the earlier of the production date or installation date. To maintain warranty validity, the system must be: Installed by a qualified installer or certified third party Operated according to the user manual and installation guide Reported promptly if any failure, fault, or warning occurs, typically within one month of detection If the system is not installed immediately, proper storage is required: keep the battery in its original packaging, in a cool, dry, and clean environment, away from flammable or corrosive materials. Manufacturer Examples GOODWE BAT Series; Performance warr...
