

Firewall connection to access switch

Overview

This article shows how to access from a LAN to a Switch in front of the Firewall that isn't part of that LAN. The configuration examples in this document were created and verified in a lab environment, and all the devices were started with the factory default configuration. The Core is doing L3 routing for four VFR's. How would you configure the connection between Core and Firewall?

Currently we have a transit network (VLAN 100, 192. Routes on the Core for all. A firewall is a type of network security device component that is used to keep track of incoming and outgoing network traffic and then make decisions regarding the traffic i., which traffic to allow or deny in accordance with a set of security rules. How are the ports on either end of that link configured ie.
