## AI Overview

Grounding distribution boxes allow safe and efficient connection of multiple grounding products to a central grounding point, ensuring proper earthing for devices or personal grounding systems. Types of Grounding Distribution Boxes

1. Standard Cable Distribution Box This type connects up to four grounding products using standard connection cables with pins. It is designed for use with grounded wall sockets or earthing rods and allows extension with additional splitters if more connections are needed. The box ensures no extra voltage or radiation is introduced, making it suitable for personal grounding products like sheets, mats, or plugs .

2. Alligator Clip Distribution Box This version allows connection of up to four grounding products to grounded pipes or radiators, which are inherently grounded through the heating system. It is ideal when a grounded wall socket is unavailable. The alligator clip can attach to unpainted conductive metal surfaces, and additional splitters can expand the number of connected devices. Safety is enhanced with a 100 kOhm resistor in the connection cable .

**Industrial and Electrical Grounding Boxes** For industrial or electrical applications, distribution boxes must meet strict grounding standards. Each box and controller should be grounded using appropriate wire sizes (e.g., 10 AWG in the US, 6 mm<sup>2</sup> elsewhere). Ground resistance between system parts should be below 0.1 Ohm. Proper installation involves connecting the box to a mounting plate and then to a central grounding point, ensuring low-resistance paths for safety and equipment protection .

**Applications**

- Personal Earthing: Connecting multiple grounding sheets, mats, or rods for health and wellness purposes.
- Audio and Electronics: Reducing electrical noise by grounding multiple devices simultaneously.
- Industrial Equipment: Ensuring machinery and distribution systems are safely grounded to prevent electrical hazards.
- Building Automation: Decentralized electrical installation for smart buildings, supporting power, signal, and data distrib...
