

# Guyana Fiber Optic Cable Service First

## AI Overview

Guyana's first direct submarine fiber-optic cable was commissioned to Bartica by ENet, delivering gigabit-speed internet and 5G connectivity to the hinterland. Overview of the Project In a historic milestone for Guyana, ENet (formerly E-Networks) completed the country's first direct submarine fiber-optic cable to Bartica, a key town in Region Seven, often referred to as the gateway to the interior. The project, valued in the multibillion-dollar range, connects Bartica directly to ENet's extensive fiber-optic backbone, which now spans seven of Guyana's ten administrative regions. This initiative marks the first time residents and businesses in the hinterland have access to coastland-level digital services, including gigabit-speed internet and robust 5G mobile coverage. Technical and Logistical Achievements The submarine cable traverses two major rivers, the Demerara and Essequibo, and navigates challenging terrain to reach Bartica. The rollout involved identifying a viable submarine route and clearing paths through difficult trails, demonstrating significant engineering and logistical innovation. The network now enables full fiber-to-home gigabit speeds and advanced digital services, effectively bridging the long-standing digital divide between the coast and hinterland. Impact on Connectivity and Development The fiber-optic connection is expected to transform education, commerce, public services, and daily life in Bartica. Students can access real-time digital learning resources, small businesses can expand operations beyond regional boundaries, and public institutions can deliver services more efficiently. Prime Minister Mark Phillips highlighted the project as a technical feat and national achievement, emphasizing its role in advancing Guyana's broader Digital Guyana strategy and promoting inclusive development. Role of Government and Private Sector The project reflects a public-private partnership, with ENet investing boldly in infrastructure while the government supports digital expansion through policy and s...
