

High-speed optical-to-electrical module

Overview

Optical transceiver modules are used in high-speed optical communication systems that require high performance, compact package, and low power consumption. Optical transmission/reception functions are implemented in pluggable modules. The Keysight N7005A Optical-to-Electrical Converter is a high-sensitivity photodetector module designed for direct optical-to-electrical conversion of optical signals into Infiniium UXR realtime oscilloscope with AutoProbe III interface (≥ 40 GHz). The N7005A is a 60 GHz (-3dB, Brickwall) O/E. Kyocera Corporation (President: Hideo Tanimoto, hereinafter "Kyocera") is pleased to announce the development of a pluggable optoelectronic module (OSFP-XD*1) supporting the PCIe®*2 6. The O2E can be customized to a wide range of wavelengths and is suitable for single mode and multimode applications.
