

Hot-swap power distribution unit waterproof configuration scheme at FOB price

AI Overview

A hot-swap, waterproof PDU can be configured with dual input, modular design, overload protection, and rack-mount compatibility, with sample FOB pricing starting at US\$40 per unit.

Key Configuration Features

- Hot-Swap Capability**Modular design allows live replacement of PDUs or UPS modules without interrupting connected equipment, ensuring high availability for mission-critical systems .Dual input power cables support connection to separate utility and UPS sources, with a manual bypass switch to transfer load safely during maintenance .Hot-swap controllers, such as the ADM1177, use MOSFET switches and current-sense amplifiers to manage inrush current and overcurrent protection during module insertion or removal .
- 2. Waterproof and Environmental Protection**For outdoor or harsh environments, PDUs should have an IP65 or higher rating, ensuring protection against water jets and dust ingress.Materials and sealing techniques, such as gaskets and corrosion-resistant enclosures, prevent moisture-induced failures, especially in +12V or -48V systems where ion migration can be corrosive .
- 3. Power Monitoring and Safety**Metered or monitored PDUs provide real-time voltage, current, and load monitoring to prevent overloads and facilitate load balancing .Overload protection and surge suppression are essential for safeguarding sensitive IT equipment.
- 4. Rack-Mount and Modular Design**Vertical or horizontal rack-mounted PDUs with IEC C20/C19 outlets are standard for data centers and edge installations .Modular PDUs allow integration with smart cabinets, UPS systems, and environmental sensors for centralized monitoring .

Example FOB PricingA 24-port vertical rack-mounted hot-swap PDU with overload p...
