

# How much does a Fibre Channel card cost

## AI Overview

Fibre Channel cards typically cost between \$100 and \$1,500, depending on speed, brand, and features. Fibre Channel cards, also known as Host Bus Adapters (HBAs), are used to connect servers to storage area networks (SANs). The price of a card depends on several factors, including data transfer speed (8Gb, 16Gb, 32Gb), number of ports, and manufacturer. Entry-level or older models can be found for around \$100–\$300, while high-performance or enterprise-grade cards from brands like Broadcom, QLogic, or HPE can cost \$500–\$1,500 or more.

**Factors Affecting Price**

- Speed and Bandwidth:** Higher-speed cards (16Gb or 32Gb) are more expensive than 8Gb models.
- Number of Ports:** Dual-port cards cost more than single-port cards due to increased connectivity.
- Brand and Certification:** Enterprise brands with certified compatibility for servers and SANs often carry a premium.
- Form Factor:** PCIe cards are standard, but specialized adapters for blade servers or converged network adapters (CNAs) may cost more.
- Included Features:** Some cards support advanced features like offloading, virtualization, or multi-protocol support (Ethernet + Fibre Channel), which increases cost.

**Where to Buy**

Online marketplaces like eBay offer a wide range of new and used Fibre Channel cards, often at lower prices for older models. Specialized IT hardware suppliers and distributors provide enterprise-grade cards with warranties and support.

In summary, for planning purposes, you can expect to pay \$100–\$300 for basic cards and \$500–\$1,500 for high-end, enterprise-grade Fibre Channel cards, with prices varying based on speed, ports, and brand.
