

How much does a fully automatic optical cable bundling machine cost

AI Overview

A fully automatic optical cable bundling machine typically costs between \$10,000 and \$50,000, depending on specifications, automation level, and supplier.

Price Range and Factors

The cost of these machines varies widely based on several factors:

- Automation and Features:** Machines with full automation, including cable feeding, cutting, coiling, tying, and unloading, tend to be at the higher end of the price range. Basic semi-automatic or hand-held models are less expensive.
- Cable Specifications:** Machines designed for larger diameter cables or higher throughput may cost more. For example, machines handling single-core or multi-core cables with diameters from 2mm to 5mm and cutting lengths up to 60m are more sophisticated.
- Power and Capacity:** Machines with higher feeding speeds, longer battery life, or larger pay-off capacity (up to 2 tons) increase the cost.
- Supplier and Location:** Chinese manufacturers on platforms like Made-in-China, Alibaba, and AliExpress offer competitive pricing, but shipping, import duties, and after-sales service can affect the total cost.

Examples of Machines

- Industrial Fully Automatic Machines:** These include features like soft-touch control panels, precise length cutting (0.3% accuracy), and automatic coiling and tying. They are suitable for high-volume production and typically cost \$20,000–\$50,000.
- Hand-Held or High-Altitude Cable Bundling Machines:** These are portable, battery-powered, and designed for field operations. They are more affordable, generally in the \$10,000–\$20,000 range, depending on battery capacity and strapping range.
- Smart or Economic Models:** Some suppliers offer “smart” machines with simplified packing and moderate automation, which may reduce costs while maintaining efficiency.

Recommendation

For an accurate price, it is best to contact suppliers directly with your cable specifications, production volume,...
