

How to apply a fixed quota to a terminal box

AI Overview

You can apply a fixed disk quota to a user or group by enabling quota support on the filesystem, creating quota files, and setting hard and soft limits using the `edquota` command.

Step 1: Ensure Quota Support First, confirm that your filesystem supports quotas. Common Linux filesystems like `ext3`, `ext4`, `XFS`, and `Btrfs` support quotas. Then, install the quota tools if they are not already installed. On Ubuntu/Debian, use: `CodeCopy sudo apt update` `CodeCopy sudo apt install quota` On RHEL/CentOS: `CodeCopy sudo yum install quota`

Step 2: Enable Quotas in /etc/fstab Edit the `/etc/fstab` file to add quota options for the desired partition. For user quotas, add `usrquota`; for group quotas, add `grpquota`. Example for `/home`: `CodeCopy /dev/sda1 /home ext4 defaults,usrquota,grpquota 0 2` Save the file and remount the filesystem: `CodeCopy sudo mount -o remount /home`

Step 3: Initialize Quota Files Create and initialize quota files using `quotacheck`: `CodeCopy sudo quotacheck -cug /home` This generates `aquota.user` and `aquota.group` files in the root of the filesystem.

Step 4: Enable Quota Enforcement Activate quotas with: `CodeCopy sudo quotaon /home`

Step 5: Set Fixed Quotas Use the `edquota` command to assign quotas to a user or group. For a user: `CodeCopy sudo edquota username` This opens a text editor where you can set:
Soft limit: a threshold that triggers warnings
Hard limit: the absolute maximum disk usage
nodes: number of files allowed
For a group, use: `CodeCopy sudo edquota -g groupname`

Step 6: Verify and Monitor Quotas Users can check their quota with: `CodeCopy quota -s` Administrators can view all users' usage with: `CodeCopy sudo repquota /home` Regular monitoring ensures quotas are enforced and allows adjustments as needed.

Step 7: Optional: Set Grace Periods To allow temporary exceeding of soft limits, configure grace periods: `CodeCopy sudo ed...`
