

How to modify a router when only fiber optic is available

Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for. In the world of fiber optics, the Optical Network Unit (ONU) – often called a fiber modem – is your gateway to the internet. By default, most ONUs operate in Router Mode. You have credentials to set up your PPPoE WAN connection (username and password). This means it performs multiple critical tasks in a single, sleek device. You can use one device for. The new device is a modem only (actually, ONT, if its fiber) and you need to use your own router. ** Boot sequence: Turn OFF all the devices including modem, router and device. In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds.
