

How to reset the fiber optic cable box

AI Overview

You can reset your fiber optic cable box using a simple power cycle or a factory reset, depending on the issue and desired outcome.

Soft Reset (Power Cycle) A soft reset is the safest first step and often resolves minor connectivity issues:

- Locate the ONT:** This is usually a small box near where the fiber optic cable enters your home, often in a garage, basement, or near your electrical panel.
- Unplug the Power Cord:** Disconnect the ONT from its power source. Do not unplug the fiber optic cable itself.
- Wait 30–60 Seconds:** Allow the device to fully discharge and clear temporary glitches.
- Plug the Power Cord Back In:** Reconnect the power and wait for the ONT to complete its boot-up sequence. This may take several minutes.
- Check Indicator Lights:** Look for stable lights, usually solid green for power, optical, and network status.
- Test Your Internet Connection:** Ensure your devices can connect and that speeds are stable.

Hard Reset (Factory Reset) A hard reset restores the ONT to its original factory settings and should only be used if a soft reset does not resolve the issue:

- Locate the Reset Button:** Most ONTs have a small recessed button on the back or bottom.
- Press and Hold the Reset Button:** Use a paperclip or pin to hold the button for 10–15 seconds while the ONT is powered on.
- Release and Wait:** Let the ONT reboot. This process can take several minutes as the device restores factory settings.
- Reconfigure Network Settings:** You may need to re-enter Wi-Fi passwords or contact your ISP for re-activation, as all custom configurations are erased.

Precautions

- Backup Settings:** Note your Wi-Fi name, password, and any custom configurations before performing a hard reset.
- Disconnect Devices:** Unplug connected devices to prevent accidental data loss.
- Check with ISP:** If unsure, contact your internet service provider for guidance, especially before a factory reset.
- Avoid Unplugging Fiber Cable:** The fiber optic cable is fragile and should only be disconnected if instructed by your ISP.

Additional Tips If your ONT is powered but the internet is still down, check the outlet or GFCI and res...
