

How to strip the outer layer of a four-core optical cable

AI Overview

Use a fiber optic cable stripper to carefully remove the outer jacket, taking care not to damage the inner fibers or aramid yarn. Tools and Safety Before starting, ensure you have a clean, well-lit workspace, safety glasses, and proper disposal for fiber scraps. The main tool for stripping the outer layer is a fiber optic cable stripper or a specialized cable cutting scissors designed for optical cables. Adjust the blade depth according to the cable diameter to avoid cutting the inner fibers or aramid yarn. Step-by-Step Process Inspect the Cable Examine the cable for any kinks, bends, or damage. Ensure the cable is intact and free from defects. Measure and Mark Determine the length of the outer jacket to strip based on your termination or splicing requirements. Mark the strip point with a marker. Adjust the Stripper Set the stripper blade depth to match the thickness of the outer jacket. For four-core cables, the outer sheath is usually a soft plastic or PVC layer. Make a Radial Cut Place the stripper at the marked point and make a radial cut around the circumference of the cable. Some tools allow a helical or spiral cut, which is ideal for midspan stripping. Remove the Jacket Gently pull off the outer jacket using your fingers or needle-nose pliers. Avoid pulling too hard to prevent damaging the aramid yarn underneath, which provides tensile strength. Inspect the Aramid Yarn Check that the aramid fibers are intact. If any fibers are cut, adjust the stripper to a larger gauge and repeat the process. Prepare for Inner Fiber Stripping Once the outer jacket is removed, you can proceed to strip the buffer coatings of the individual fibers for splicing or termination. Tips for Best Results Always maintain sharp cutting edges on your tools to ensure clean cuts. Work slowly and carefully to avoid nicking the fibers. Clean the stripped area with alcohol wipes to remove debris before termination. If working with multiple fibers, strip eac...

Good stripping techniques for your fiber optic cable ...

Proper stripping can be done with strip tools designed specifically for the diameter buffer you are trying to strip. These are generically referred to as "Fiber Strippers".

How to Strip and Clean Fiber-Optic Cable?

To strip and clean outdoor FO cable, you have to start with the outer jacket. Step 1: Mark the armor (if the cable has armor) with the tip of your knife to note a length

Stripping Techniques For Your Fiber Optic Cable Assembly Process ...

Good fiber optic stripping techniques in your cable assembly process are crucial. See best practices for how to strip fiber optic cable buffers & jackets.
