

How to use the multimedia publishing terminal box

AI Overview

A multimedia publishing terminal box can be used by connecting it to your network, configuring it via the associated software, and managing content playback or telephony services according to the device type.

For LED Content Publishing (e.g., NovaStar Taurus)

Connect the Terminal Box Launch the ViPlex Express software and establish a connection between your PC and the Taurus multimedia player to ensure proper communication with the device .Create a Playback Solution Navigate to the Solution Management Interface in ViPlex Express. Create a new solution and give it a name. This solution acts as a container for all scheduled media content, including videos, images, scrolling text, and web widgets .Configure Content and Layout After creating the solution, you can assign media files, set playback timing, adjust resolution, and design layouts. This step ensures that content is displayed correctly on the LED screens .Publish and Schedule Once the solution is configured, you can deploy it to the terminal box. The software allows centralized control, enabling scheduled content delivery across multiple time slots and multiple terminals .

For Telephony Services (e.g., InnoMedia MTA)

Physical Installation Mount the MTA device on a rack or wall using the provided flanges. Connect the broadband Ethernet cable to the WAN port and attach the analog phone lines via the Amphenol connector to a patch panel with RJ-11 ports .

Device Initialization and Provisioning The cable operator provisions the MTA with the necessary firmware and software. The device is then configured with network parameters such as IP address, subnet mask, and provisioning server address, typically obtained via DHCP .

Activation and Verification The MTA is activated by registering it with the provisioning server, which assigns phone numbers and service features. The operator verifies proper operation by test...
