

How wide is the cable tray support for an 800

AI Overview

The support for an 800mm cable tray is designed to accommodate the full 800mm width of the tray, typically using standard 41x41mm strut channels. Detailed Information For an 800mm ladder cable tray, the support bracket is designed to match the tray width of 800mm. The Strut Pro Runner 800mm bracket, for example, is a modular heavy-duty rung bracket that works with standard 41x41mm strut channels to build custom cable ladder trays, ensuring the tray is fully supported across its width. Cable ladders of 800mm width, such as those made from stainless steel or hot-dip galvanized steel, have a nominal width of 800mm, with side rails welded to the rungs. The support system is engineered to align with this width, providing structural stability and proper load distribution. When selecting supports, it is important to consider: Material compatibility: HDG or stainless steel supports match the tray material for corrosion resistance. Bracket spacing: Typically, supports are spaced according to the tray load and span requirements. Strut channel size: Standard 41x41mm strut channels are commonly used for 800mm trays. In summary, the support width for an 800mm cable tray is effectively 800mm, designed to fully accommodate the tray while using standard strut channels for mounting and structural integrity.
