

Is it difficult to replace cable with fiber optic cable

Overview

Unfortunately, current state and federal rules and procedures can complicate efforts to replace or decommission copper networks – so industry leaders must step up efforts to provide more education on copper's limitations and how to effectively and efficiently upgrade to fiber. Determining whether or not the fiber optic cables need to be replaced is the first step toward replacing them. This requires figuring out why the current wires are being changed and how bad they are. It may be required to repair the cables if they are broken or have degraded to the point that they. A fiber optic network is a way to transmit data and realize communications via fiber optic cabling instead of Ethernet cabling. Fiber optic cables offer much higher bandwidth and longer distance capabilities than traditional Ethernet cables, making them an ideal choice for. Because of its ability to overcome limitations to speed and distance imposed by copper cable, optical fiber provides a compelling alternative to copper cable.
