

List of cable covers for distribution boxes

AI Overview

Cable covers and protectors are available in various types, including floor, wall-mounted, modular, and industrial-grade options to safeguard and organize cables in distribution boxes.

Types of Cable Covers

- 1. Floor Cable Covers / Protectors** These are designed to protect cables from foot and vehicle traffic. They are typically made of heavy-duty rubber or plastic, often with a non-slip surface and high-visibility colors. Some models feature modular interlocking designs for easy setup and reconfiguration, and flexible designs allow protection around curves and corners. Examples include Checkers® cable protectors, Ultra-Sidewinder® cable protectors, and Vestil cable bridges, suitable for warehouses, construction sites, and industrial environments.
- 2. Wall-Mounted or Surface Covers** These covers are used to route cables along walls or ceilings, keeping them organized and out of the way. They are often made of durable plastic or metal and can be installed with screws or adhesive. They are ideal for offices, conference rooms, and entertainment venues where cables need to be hidden or protected.
- 3. Hinged or Removable Lid Covers** Some cable covers feature a hinged or removable lid, allowing easy installation or removal of cables without disassembling the entire cover. These are commonly used in environments with frequent cable changes, such as trade shows or temporary setups.
- 4. Electrical Box Covers** For distribution boxes specifically, electrical box covers provide protection for internal wiring and connections. These covers are available in plastic or metal, and some are designed to meet industrial standards for safety and durability. Eaton's Crouse-Hinds series and ABB's DS21-G covers are examples of high-quality options for distribution boxes.
- 5. Modular and Flexible Covers** Modular cable covers allow multiple cables to be routed together and can be reconfigured or extended as needed. Flexible designs accommodate curves and S-shaped cable runs, making them suitable for complex layouts in industrial or commercial settings.
