

Low-voltage branch box double busbar

Overview

The fixed metal-clad Enclosure comprises: A Control Cubicle in which the low voltage relays and instruments are fitted. Two busbar chambers segregated from each other and running the length of the switchboard. Take advantage of the benefits of digitalization at every step of the project with the SIVACON 8PS busbar trunking systems – from planning to installation on up to operation. SIMARIS software tools provide efficient support for your planning: among other advantages, you can configure the SIVACON 8PS. This step-by-step guide describes the basic concept of double pulse testing (DPT) and the necessary measurement setup and provides an overview of the parameters influencing the measurement. Learn about the practical tips for carrying out the measurements. Circuits can be added and removed easily as they are located just above their respective racks. The range is available with copper or alumin box slots on both sides of the busbar system. This a lows for greater flexibility in installations. Up to 10 tap off ordance with IEC 61439-1/6 and is CE approved.
