

Maldives New Material Cable Tray Support

AI Overview

Cable tray supports in the Maldives are available in metal, aluminium, and fiberglass reinforced plastic (FRP/GRP), with local suppliers offering full support systems including brackets, cantilever, and trapeze fittings.

Material Options

Metal and Aluminium Cable Trays: These are widely used for industrial and commercial installations. They provide strong structural support and are suitable for indoor and outdoor applications. Aluminium trays are lightweight, corrosion-resistant, and ideal for humid or coastal environments like the Maldives, while steel trays offer higher load capacity but may require protective coatings to prevent corrosion.

Fiberglass Reinforced Plastic (FRP/GRP) Trays: FRP trays are highly resistant to corrosion, chemicals, and UV exposure, making them suitable for harsh environments, including offshore and coastal installations. They are lightweight, non-conductive, and can be installed with a variety of support systems such as cantilever and trapeze junctions.

Support Systems

Cable tray supports include:

- Cantilever Supports:** Extend from walls or columns to hold trays without obstructing floor space. Ideal for long runs and heavy cable loads.
- Trapeze Supports:** Suspended from ceilings or beams, providing stable support for multiple trays in parallel.
- Brackets and Fittings:** Adjustable brackets, splices, and connectors allow flexible installation and secure positioning of trays. Slot patterns in trays facilitate easy attachment of clamps, ties, and tubing.
