

Metal distribution box installed on a metal wall

Overview

A wall mount metal distribution box is a crucial component in electrical systems, providing secure housing for circuit breakers, fuses, and wiring connections. These enclosures ensure safety, organization, and protection from environmental factors and accidental contact. It takes the incoming power and safely distributes it to different circuits throughout your building. Article 314 applies to: These. Wall mounting is the most common installation method. Based on the installation form, it can be divided into surface mounting and concealed mounting methods, each with its own characteristics; the appropriate solution should be selected based on the actual project conditions. 2mm thick steel and painted in RAL 7035 gray. 130x50mm perforation for the passage of cables. Cover with rubber gasket is supplied. Certified for Safety – Meets IEC/CE standards for.
