

Palau Mobile IDC Data Center Construction

AI Overview

Palau is advancing its digital infrastructure with the construction of its first Tier III data center and a nationwide 4G/5G mobile network, leveraging modular data center solutions and Open RAN technology. Tier III Data Center Development Palau is set to host its first Tier III data center, spearheaded by Singapore-based DC Alliance in partnership with Pacific Blockchain Corporation. The facility will initially support 1MW of power with up to 200 racks, expandable to 5MW and 1,000 racks as demand grows, making it the first Tier-rated facility in the Republic of Palau. The project leverages Palau's strategic location as a digital hub in the Pacific, enhanced by submarine cable connectivity, including the 2017 SEA-US cable and the upcoming Google-Facebook Echo cable spur. DC Deployed provides construction management services tailored to Palau's unique environmental and logistical conditions. Their approach includes prefabricated modular data centers, which are pre-assembled and tested for rapid deployment, scalability, and high reliability. This method ensures efficient project execution while minimizing disruptions to local operations. Consulting services cover contractor selection, MEP coordination, and compliance with local regulations, ensuring sustainability and resilience against Palau's climate challenges. Mobile Network Modernization Palau's Palau National Communications Corporation (PNCC) is constructing a nationwide 4G/5G Standalone mobile network, expected to be fully operational by Q1 2027. The project adopts Open Radio Access Network (ORAN) principles, allowing interoperability and reducing dependency on single vendors. This modernization will provide faster speeds, lower latency, and full nationwide coverage, including remote islands, while supporting critical services such as education, healthcare, and emergency response. The network deployment invol...
