

Price of 90-degree sliding elbow for cable trays

AI Overview

The price of a 90-degree cable tray elbow typically ranges from \$15 to \$80 per unit, depending on material, size, and supplier. Price Range and Factors The cost of a 90-degree elbow for sliding cable trays varies widely based on several factors:

- Material:** Galvanized steel elbows are generally the most cost-effective, ranging from \$15 to \$40 per piece. Stainless steel (304 or 316) elbows, suitable for corrosive environments, can cost \$40 to \$80. Aluminum and PVC options fall in between, depending on size and quality.
- Size and Load Capacity:** Larger elbows designed for wider trays or heavier cable loads are more expensive. Ensure the elbow matches the width, depth, and side height of your existing tray system.
- Compliance and Standards:** Elbows meeting standards such as NEMA VE 1/2, UL 2043, or IEC 61537 may carry a premium due to verified safety and performance ratings.
- Supplier and Quantity:** Bulk orders from suppliers like Alibaba or industrial distributors can reduce per-unit cost, while single-unit purchases from specialty suppliers may be higher.
- Additional Considerations**
 - Installation:** Sliding cable tray elbows are designed for easy installation, often secured with screws on each side, which can reduce labor costs.
 - Durability:** Investing in higher-quality elbows with corrosion resistance and fire ratings can reduce long-term replacement costs.
 - Application:** Industrial, commercial, or vehicle installations may require specific materials or fire ratings, influencing the price.

For precise pricing, it is recommended to request a quote from suppliers such as McMaster-Carr, Grainger, or specialized cable tray distributors, specifying the material, size, and quantity needed.
