

Price quote for air-cooled optical power meter

AI Overview

Air-cooled optical power meters typically range from around \$500 for basic models to over \$3,000 for high-end, precision units. Price Range Overview The cost of an optical power meter depends on its measurement range, accuracy, features, and sensor type. Entry-level models suitable for general fiber optic maintenance and installation can start at approximately \$100–\$500, offering basic power measurements and limited wavelength coverage. Mid-range meters, often priced between \$500 and \$1,500, provide enhanced accuracy, multiple wavelength testing, and data logging capabilities. High-end or professional units, including air-cooled thermal sensors for high-power lasers, can exceed \$3,000, reflecting advanced calibration, wide spectral coverage, and high precision measurements.

Air-Cooled Thermal Sensors Air-cooled optical power meters, such as the Ophir L100 (500)A-PF-120 thermopile sensor, are designed for high-power laser measurements (1 W to 500 W) and feature large apertures and extended spectral ranges (0.15 to 20 μm). These sensors use convection or conduction cooling to maintain accuracy during high-power measurements. Such specialized air-cooled meters are typically in the premium price category, often costing several thousand dollars due to their large measurement range, precision calibration, and robust construction.

Factors Affecting Cost

- Measurement Range:** Higher power or energy ranges require more sophisticated sensors, increasing cost.
- Wavelength Coverage:** Meters covering broader spectral ranges or multiple wavelengths are more expensive.
- Accuracy and Resolution:** Premium models offer femtowatt-level resolution and high sampling rates.
- Connectivity and Features:** USB interfaces, software integration, and data logging add to the price.
- Sensor Type:** Air-cooled thermal sensors for high-power las...
