

Saudi Arabia Fire-resistant Cable Trays

AI Overview

For Saudi Arabia, GRP/FRP cable trays and certified fire-resistant metal trays like Cablofil are recommended due to their durability, fire resistance, and suitability for harsh desert conditions. GRP/FRP Cable Trays Glass Reinforced Plastic (GRP) or Fiber Reinforced Plastic (FRP) trays are highly suitable for Saudi Arabia's industrial and coastal environments. They offer:

- Fire resistance through fire-retardant resins meeting international standards.
- Corrosion resistance against chemicals, moisture, and salt, ideal for offshore, petrochemical, and desert installations.
- Electrical insulation, reducing shock and grounding risks.
- UV stability for long-term outdoor durability without degradation from sun exposure.
- Lightweight and easy installation, reducing labor costs and allowing flexible routing.

GRP trays are widely used in oil & gas, petrochemical plants, electrical utilities, and commercial infrastructure in Saudi Arabia.

Fire-Resistant Metal Cable Trays For projects requiring high fire endurance, metal trays with fire wraps or intumescent coatings are recommended:

- Fire wraps provide thermal protection and flexibility for irregular routing, helping maintain cable ampacity in extreme heat.
- Intumescent coatings offer smooth, inspection-friendly surfaces and are easier to maintain in dusty or hazardous environments.
- Certified systems like Cablofil offer E30-E90 fire ratings, tested up to 1000°C for 90 minutes, ensuring compliance with international fire safety standards.
- Available in hot-dip galvanized, stainless steel (304L/316L), and electro-zinc finishes, suitable for desert and coastal conditions.

Selection Considerations When choosing fire-resistant cable trays for Saudi Arabia:

- Fire rating:** Select EI60, EI90, or EI120 based on project requirements.
- Environmental durability:** Ensure UV, heat, and corrosion resistance for desert and coastal sites.
- Electrical safety:** Non-conductive trays (GRP) or properly grounded metal trays reduce shock hazards.
- Maintenance and inspection:** Coatings are easier to inspect, while wraps allow retrofitting but may be disruptive.
- Supplier r...**
