

Screen Top Small Bus DC

AI Overview

Small bus LED screens are compact, high-brightness displays designed for route information, advertising, and passenger guidance, often compatible with DC power systems.

Overview Small bus screens are intelligent display devices installed on buses to provide real-time information, advertisements, or multimedia content. They can be mounted on the front, side, rear, or inside the bus, with external screens typically showing route information or commercial ads, and internal screens displaying news, weather, or promotional content. These screens are designed for high visibility, even in strong sunlight, and often feature wide viewing angles for better passenger and pedestrian readability.

Features

- High Brightness & Visibility:** LED technology ensures clear display in daylight conditions.
- Flexible & Compact Design:** Some small screens use flexible LED modules (e.g., 240x120mm, 320x160mm, 256x128mm) that can bend or curve to fit irregular bus surfaces.
- Thin & Lightweight:** Modules are typically ultra-thin (around 8.6mm), saving space and allowing easy installation.
- Waterproof & Durable:** Many models are equipped with high-density waterproof rings, making them suitable for outdoor use in rain.
- DC Power Compatibility:** Small bus screens can operate on DC power systems, making them suitable for bus electrical setups.

Control and Content Management Small bus screens often integrate with intelligent control systems that allow remote updates via 4G/5G, GPS, or wireless networks. Content can include route updates, emergency announcements, or advertisements. Advanced systems may include:

- Media Players:** Ruggedized PCs installed on buses to store and schedule content.
- Content Management Systems (CMS):** Web-based platforms for centralized scheduling, monitoring, and reporting.
- Batch Control & Voice Integration:** Some screens support Excel/CSV batch updates and can synchronize with bus voice systems to announce next stops.

Applications

- Passenger Information:** Real-time route, arrival times, and service updates.
- Advertising:** Mobile advertising platform with hig...
