

Standard Outdoor Cabinet Size Specifications

At Overview

Standard outdoor cabinets typically feature 30-inch high base boxes, adjustable legs, depths of 24–28 inches, and widths in 3-inch increments, constructed from weather-resistant materials like stainless steel or HDPE. Cabinet Heights and Legs Outdoor base cabinets generally have a standard height of 30 inches, with adjustable leveling legs ranging from 3.75 to 5.75 inches, or 2 to 3.25 inches for ADA-compliant heights. Wall cabinets vary in height from 12 inches up to 42 inches, with taller units including multiple adjustable shelves. Adjustable legs allow cabinets to be leveled on uneven outdoor surfaces, ensuring stability and proper alignment. Cabinet Depths Standard base cabinet depths are typically 27.88 inches, with optional shallower units at 24.88 inches to accommodate specific design needs. Grill cabinets may extend to 27.75 inches including doors. Wall cabinets are usually 13.5 inches deep, providing sufficient storage without protruding excessively from the wall. Cabinet Widths Cabinet widths are available in 3-inch increments, starting at 9 inches, allowing for flexible configurations to fit various outdoor kitchen layouts. This modular approach enables designers to create linear, L-shaped, or U-shaped kitchen arrangements efficiently. Materials and Construction Outdoor cabinets are constructed from weather-resistant materials such as 20-gauge 304 or 316 stainless steel or high-density polyethylene (HDPE). They feature solid backs, CNC-machined precision, stainless steel hinges, and full-extension soft-close drawer slides. Powder-coated finishes, woodgrain, or stone-look options are available for aesthetic customization. Magnetic door closures and rain gaskets are standard to protect contents from moisture. Shelving and Storage Shelving options include half-depth, full-depth, roll-out, or heavy-duty shelves, with adjustable configurations depending on cabinet height...
