

The electrical wiring in the computer room s power distribution box is exposed

Overview

The first step is to de-energize the exposed wire to eliminate the immediate threat of electrocution. Locate the electrical service panel, often called the breaker box, and turn off the corresponding circuit breaker. If the specific circuit cannot be identified quickly, or if the wire is sparking. These may be overhead power lines, electrical wiring in a workplace, or cables buried under the ground. Look for electrical wires, cables or equipment near where you are going to work and check for signs warning of dangers from. Other work that exposes an employee to electrical hazards greater than, or equal to, the electrical hazards posed by operations listed specifically in paragraphs (b) (3) (i) (A) through (b) (3) (i) (D) of this section. Electrical safety hazards present a critical risk to businesses, demanding prompt action to mitigate potential dangers.
