

The wiring in the power distribution box has connectors

Overview

It is usually equipped with circuit breakers, fuses, terminal connectors, and other components. A distribution board or distribution box is where the main power supply is distributed to multiple loads. And all the switching and protective devices are installed in the distribution box. It is mainly used to isolate fault circuits, prevent overload, and ensure the safe operation of. Arrangement order: The circuit breakers should be arranged from left to right, and the reserved position is generally placed on the right side of the distribution box. Wire color: The neutral wire is blue, and the color of the phase wire (A phase is yellow, B phase is green, and C phase is red). In general, to wire a power distribution block to your single input source, you need to: I will cover more details below. Use a trickle charge to refill your battery.
