

Wall-mounted bracket for cable trays

AI Overview

Wall-mounted brackets provide secure, durable support for cable trays, ensuring proper load distribution, alignment, and safe cable management in industrial and commercial settings.

Types of Wall-Mounted Cable Tray Brackets

- L-Type Wall Support Brackets** Designed to hold cable trays at a fixed elevation along walls. Available in various widths (4", 6", 8", 12") to match tray sizes. Often made from stainless steel or electro-plated zinc for corrosion resistance.
- V-Type Wall Brackets** Provide angled support for cable trays, useful for routing around obstacles. Suitable for wire mesh trays and heavy-duty installations.
- Spider Brackets** Flexible mounting positions for wire mesh trays. Ideal for small spaces or custom routing in data centers and network closets. Typically powder-coated metal for durability.
- Cantilever Wall Brackets** Extend trays away from the wall, supporting heavier loads. Available in multiple lengths (e.g., 8" and 12") for different tray widths.
- Reinforced Wall Brackets** Heavy-duty brackets for high-load applications. Hot-dipped galvanized or stainless steel options for exterior or industrial use.
- Universal Brackets** Compatible with multiple tray types and sizes. Include L-brackets, shelf supports, and corner brackets for flexible installation.

Key Features to Consider

- Material and Finish:** Stainless steel, electro-plated zinc, or powder-coated steel for corrosion resistance.
- Load Capacity:** Ensure the bracket supports the weight of the cable tray and cables.
- Compatibility:** Match bracket width and type to the cable tray system (wire mesh, solid bottom, or perforated trays).
- Installation:** Most require mounting anchor bolts; some kits include clamps for secure attachment.
- Adjustability:** Some brackets allow height or angle adjustments for precise tray alignment.

Installation Tips

- Position brackets to maintain proper load distribution along the tray span.
- Support trays near splice joints and at quarter points of the span.
- For heavy or long trays, use reinforced or cantilever brackets to prevent sagging.
- Ensure wall anchors are rated for the load and wall type (concrete, masonry, etc.).
