

What are the model numbers of the distribution boxes

AI Overview

Common distribution box model numbers include TOP-TS, TOP-TF, TOP-LS, TOP-PS, TOP-PF, and TOP-S. Distribution boxes, also known as DB boxes, are essential for safely distributing electrical power across circuits in homes, offices, and industrial settings. The model numbers typically indicate the type, size, and configuration of the box. For example:

- TOP-TS: Standard distribution box, available in multiple ways (1-way to 36-ways)
- TOP-TF: Flush-mounted distribution box
- TOP-LS: Large-size distribution box for higher capacity circuits
- TOP-PS: Power-specific distribution box
- TOP-PF: Power and fuse combination box
- TOP-S: Small or compact distribution box for limited circuits

Some manufacturers, like Panasonic, offer modular distribution boxes with 16- and 32-module base options, which can be expanded horizontally or vertically and customized with transparent or opaque covers. Other systems, such as gesis® RAN distribution boxes, are designed for decentralized power and data distribution and can be tailored for specific applications, including room automation and industrial setups. When selecting a distribution box, consider the number of ways, mounting type (flush or surface), modular expandability, and safety features such as IP ratings and flame-retardant materials. These factors often correspond to the model number and help ensure compatibility with your electrical system.
