

Where is the Italian butterfly-shaped optical cable factory located

AI Overview

The Italian factory producing butterfly-shaped optical cables is located in Battipaglia, Salerno, Italy. The factory is operated by Prysmian Group, one of the world's leading producers of optical fibre and telecom cables. The FOS optical fibre plant in Battipaglia serves as a centre of excellence for optical fibre production in Italy and is among the most advanced facilities globally, employing around 300 highly specialized staff. This plant produces a significant portion of Europe's optical fibre, including innovative designs like the butterfly-shaped cables used for high-density installations.

Factory Features and Significance

Production Capacity: The Battipaglia plant produces approximately 9 million kilometers of optical fibre annually, contributing to Prysmian's global output of around 30 million kilometers.

Technological Innovation: The facility has developed advanced fibres such as the BendBright XS 200µm, which allows for higher fibre density in cables, including butterfly-shaped configurations.

Location Context: Surprisingly, the plant is not in Italy's industrial north but in a more rural area near Battipaglia, surrounded by farmland and vineyards, highlighting the integration of high-tech manufacturing in a non-industrial setting.

Applications: The butterfly-shaped optical cables produced here are designed for high-speed broadband networks, FTTH (Fiber to the Home) deployments, and dense urban installations, supporting 5G networks and smart infrastructure.

Additional Notes

Prysmian's Battipaglia facility is the only optical fibre production site in Italy, making it a strategic hub for the country's telecommunications infrastructure. The plant combines cutting-edge R&D, high-efficiency production processes, and advanced cabling technologies, ensuring Italy remains a leader in optical fibre manufacturing. In summary, if you are looking for t...
