

Working principle of ceramic ring for pigtail

Overview

The pigtail guide, also known as a snail guide, resembles a pigtail and is formed from ceramic dowel (or metal rod) which is looped to create the eyelet. Snail ceramic wire eyelets or pigtail eyelets is one of common ceramic parts used in wire winding process. Since the wire can only move within the in this case when traversing against a non-revolving polished surface, which will do no harm to to the enamel wires or yarns. Besides, the aluminum. Ceramic pig tail rings, with their high wear resistance, smooth surface, insulation, and high temperature resistance, are mainly used in industrial fields that require precise guidance and protection of wires and materials, including: Electronic wire processing, textile and fiber industry, carbon. We provide ceramic wire and textile guides used in production machinery as cost optimized standard parts. In addition we manufacture custom designs per your specifications with short deliveries and attractive pricing even for small lots. We also supply suitable ceramic replacement parts for your machines made by Niehoff, Bühler, Lesmo, Henrich, SAMP, Schmidt, Koch etc.
