

Zimbabwe s fiber optic cable chaos

Overview

The root cause of these disruptions was identified as a fault on an undersea fiber optic cable located in South Africa. This cable serves as a critical component of Zimbabwe's internet infrastructure, acting as the backbone for internet connectivity to the country. Zimbabwe, a country in Southern Africa, experienced significant internet disruptions on June 3, 2024, causing frustration and inconvenience for users across all networks. However, significant challenges continue to hinder its full potential. In a meeting held on 26 September 2024 between. Liquid Home, underpinned by the extensive and resilient fibre optic network of Liquid Intelligent Technologies, is strategically positioning itself to offer a superior “power user” experience, particularly within high-density urban environments. This is an arena where satellite technology, despite. Paratus Zimbabwe and Powertel Communications have announced that the first phase of their national fiber backbone project is now operational and carrying live traffic.
